(a) bulk: sine profile
L = 12
L = 48
L = 192
(π/2)sin(πu)
L × centred QSD density
scaled position u = y/L
(b) left layer: ascending ladder V+
limit π²/2 mV(·)
linear asymptote
L² × density
distance to left end, y
(c) right layer: descending ladder V−
limit π²/2 mV(·)
linear asymptote
L² × density
distance to right end, L − y
